ADVANCED SAFETY

ELECTRONIC STABILITY & PROTECTION (ESP)

Provides protection against the onset of stalls, spins, steep spirals and loss of control. ESP creates a soft barrier to flying outside the performance envelope.

AUTOMATIC LEVEL MODE

Returns the aircraft to a wings-level attitude with zero vertical speed at the push of a button.

HYPOXIA RECOGNITION SYSTEM WITH EMERGENCY DESCENT MODE

Monitors pilot interaction when the autopilot is engaged at cabin altitudes above 14,100 ft. If needed, the system brings the aircraft to a lower altitude to allow recovery from hypoxia.

SAFETAXI®

A highly detailed, geo-referenced airport map that displays your aircraft's position on the airfield with overlaid map of hold-short lines.

TERMINALTRAFFIC™

Syncs with SafeTaxi maps to display all ADS-B equipped aircraft and ground vehicles for increased situational awareness.

SURFACEWATCH™

Its clear visual and aural cues direct you to the correct runway for takeoff and approach.

SYNTHETIC VISION TECHNOLOGY (SVT™)

Ultimate situational awareness even in limited visibility. Using G1000's terrain-alerting database to create a detailed graphical landscape, SVT provides a "virtual reality" perspective view of ground and water features, obstacles and traffic.
